This application can be used by multiple users by registering and logging in the user registered details. Stored data of an individual cannot be accessed by another user. The application is developed using HTML, CSS and Angular.

JSON server is used for accessing data stored in JSON file.

- RBR APP (Resource Based Revenue App)

RBR APP (Resource Based Revenue App) This app is designed and developed using MS Power Apps, MS Power Automate, SharePoint. Basic idea is to develop the app for details storing for Revenue generation record and further. This app is used by higher authorities and delivery managers.

- Customer review using HTML, CSS and Python

- Core: Genetic Algorithm

The basic idea is to start from an initial, usually randomly created, set of solutions. In every iteration, new solutions are generated from the existing set using mechanisms modelled after those currently believed to apply in natural evolution of organisms. Some solutions are retained for the subsequent iteration, in which a new cycle of genetic operations are performed; thereby, the algorithm proceeds in an evolutionary manner where the fittest individuals survive .
